

ICEALERT®

IceAlert® reduces the risk of winter slip & fall accidents

Temperature-sensitive reflectors within the **IceAlert®** system begin to change colours when temperatures approach freezing. At **3.3C/38F**, the reflectors begin to transition from white to blue. At **0C/32F** or below, the reflectors turn fully blue.

This simple yet effective system allows employees, pedestrians or customers to visualize when the temperature is at or approaching freezing, promoting cautious movement.

- * Easily installed stand-alone units use no electricity or delicate electronic components.
- * IceAlerts are rugged, reliable, and very cost-effective.
- * Accompanying reflector signs are also available

FOR SLIPS AND FALLS

Visitors, employees and customers face slip and fall risks frequently throughout the winter months.

IceAlert® signage and temperature reflectors are a simple safety measure that comes with exceptional results. **IceAlert®** reflectors are generally placed at property entrances and exits, along with parking lots and walkways.

**SLIP AND FALL PREVENTION SYSTEMS FOR
HAZARDOUS WINTER WEATHER**
